History

Projects

2023

Web development

.Net Core, Angular, RxJs, Springboot, Node.js, TypeScript, JavaScript, HTML5, CSS, Azure, GitHub Actions

Example site: <https://www.ingyenszigeteles-magyarorszag.hu/>

Desktop application development

Languages: C, C++, C#, Java, Powershell, Python, VBA

Engines: Unreal Engine, Unity, OLC Pixel Game Engine

Highlights:

- Crypto trading bot and backtesting framework (with walk forward optimizer) using reinforcement learning for automated trading on spot markets.
- Asteroids clone indie game in development:

Database

MySQL, Microsoft SQL Server, PostgreSQL, Oracle SQL Developer

Cloud

- Deployments on Azure, Vercel through Github actions
- Deployment on AWS (to Linux VM)
- Monitoring apps running in OCI

Work experience

October 2025

January 2026

Full-Stack Developer & Automation Specialist

Hőplusz Energetikai Kft., Budapest

Project: Ingyen Szigetelés Magyarország

Developed a digital platform for a national insulation grant program, focusing on connecting user-facing marketing with automated backend processes.

By leveraging serverless architecture, the system successfully handled thousands of visitors and hundreds of applications without incurring infrastructure costs.

Key Contributions:

Frontend Development: Built a responsive 5-page marketing site and a secure User Portal using Angular. This included a multi-part grant application form with data validation and retrieval views for returning users.

Backend & Security: Implemented serverless logic using Supabase Edge Functions to manage lead collection and automated user registration. Set up PostgreSQL Row Level Security (RLS) to ensure users can only access their own data while allowing administrative oversight.

Workflow Automation: Created custom Google Apps Scripts to replace manual data entry, including a geographic coverage validator and a bulk emailer engine integrated with the Resend API.

Efficient Development: Utilized AI-assisted coding workflows to move quickly from concept to a production-ready state, handling both architectural planning and integration debugging.

Infrastructure Management: Managed deployment on Vercel and Supabase, optimizing for free-tier limits to ensure long-term cost-efficiency.

Data Analysis: Performed settlement-based geospatial analysis to accurately define the program's marketing zones and service boundaries.

Collaboration: Acted as a technical point of contact between the CEO and marketing agencies to streamline lead generation and email workflows.

Technical Stack:

Frontend: Angular, TypeScript, RxJS, HTML5, SCSS.

Backend: Supabase, Deno (Edge Functions), PostgreSQL (RLS).

Tools/APIs: Google Apps Script, Regex, Resend API, QGIS.

Hosting: Vercel (Edge Network), DNS & SMTP Management.

September 2023

Operator 24/7

BPC Payments Services Zrt., Budapest

L1 operational support within payment processing industry.

Responsibilities include monitoring file exchange between

	payment network participants, monitoring fault rate of transactions, ATMs and other network/microservice components, incident management, user management, and automation of repetitive tasks. Technologies: Zabbix, Grafana, Jenkins, OCI, SQL, Powershell, VBA
August 2022 May 2023	Application Administrator / Systems analyst Noispot Innovations Kft. L3 support of web applications used within the public administration sector. Responsibilities include using DevTools in common web browsers to identify error messages, liaising with developers, project managers and customers regarding errors, feature requests, new releases, maintaining end user documentations and testing new releases.
February 2018 August 2022	L1-L2 IT Service Desk Representative Unisys Corporation - European Central Bank, Braathens Regional Aviation accounts Incident, request and interaction queue monitoring. Responsibilities include initial support and classification, correlating events and performing initial fault diagnostic in Production, Pre-production and Development environments, communicating advanced cases to specialized support teams, routing outages, issues affecting multiple users with possible business impact to the specialized management team, resolution confirmation and closure of support tickets.
